

CANINE

INDICATIONS:

Overweight, neutered or mature dogs in case of:

- Food elimination trial
- Food allergies with dermatological and/or gastrointestinal signs
- Food intolerance
- Inflammatory Bowel Disease (IBD)
- Exocrine Pancreatic Insufficiency (EPI)
- Chronic diarrhoea
- Bacterial overgrowth

CONTRAINDICATIONS:

- None

FEEDING DURATION:

When a food allergy or a food intolerance is suspected, the dog's diet should be changed without any food transition. The hypoallergenic nutritional management will be continued for the pet's lifetime.

• Soy protein hydrolysate, which is composed of low molecular weight peptides, is highly digestible and of very low allergenicity.

• Very high amounts of biotin, niacin and pantothenic acid, in combination with the zinc-linoleic acid complex, reduce water losses through the skin and support the barrier effect of the skin.

• A reduced calorie content helps limit weight gain in dogs with a tendency to excess weight.

• A restricted phosphorus intake is key to support renal function with age.

FURTHER INFORMATION:

Hypoallergenic Moderate Energy is the first hypoallergenic diet specifically designed for **nutritional support of allergy in obese dogs, dogs prone to being overweight or mature dogs.**

The formula allows a reduced calorie density through moderate fat and high protein contents. Feeding guidelines allow **energy restriction** compared to standard maintenance requirements, so providing an efficient weight management programme.
