

CANINE

INDICATIONS:

- Food elimination trial
- Food allergies with dermatological and/or gastrointestinal signs
- Food intolerance
- Inflammatory Bowel Disease (IBD)
- Diarrhoea in adult dogs and puppies
- Colitis

CONTRAINDICATIONS:

- None

FEEDING DURATION:

When a food allergy or a food intolerance is suspected, the dog's diet should be changed without any food transition. The hypoallergenic nutritional management will be continued for the pet's lifetime. Sensitivity Control Canine is suitable for feeding to both adult dogs and puppies.

• Blue Whiting and tapioca reduce the risk of allergic reaction because they are rarely used in canine food preparations and are highly digestible.

• EPA & DHA, omega-3 long-chain fatty acids, help maintain skin health and intestinal mucosal integrity.

• Very high amounts of biotin, niacin and pantothenic acid in combination with zinc reduce water losses through the skin and support the barrier effect of the skin.

• Fructo-Oligo-Saccharides promote a healthy digestive flora and contribute to the intestinal mucosal integrity. This food is wheat gluten- and lactose-free.

FURTHER INFORMATION:

Sensitivity Control contains «Intensive Colour» (with high L-tyrosine content) for optimal hair pigmentation.

Because of its high level of EPA & DHA, Sensitivity Control Canine is recommended for nutritional support in cases of **chronic pruritic dermatosis** with an allergic component, including atopic dermatitis.

KEY VALUES:

Protein:	24%
Fat:	9%
Carbohydrate:	38.3%
NFE:	43.3%
Dietary fibre:	13.8%
Crude fibre:	8.8%
Metabolisable energy (C)*:	3,502 kcal/kg
Metabolisable energy (M)**:	3,365 kcal/kg
